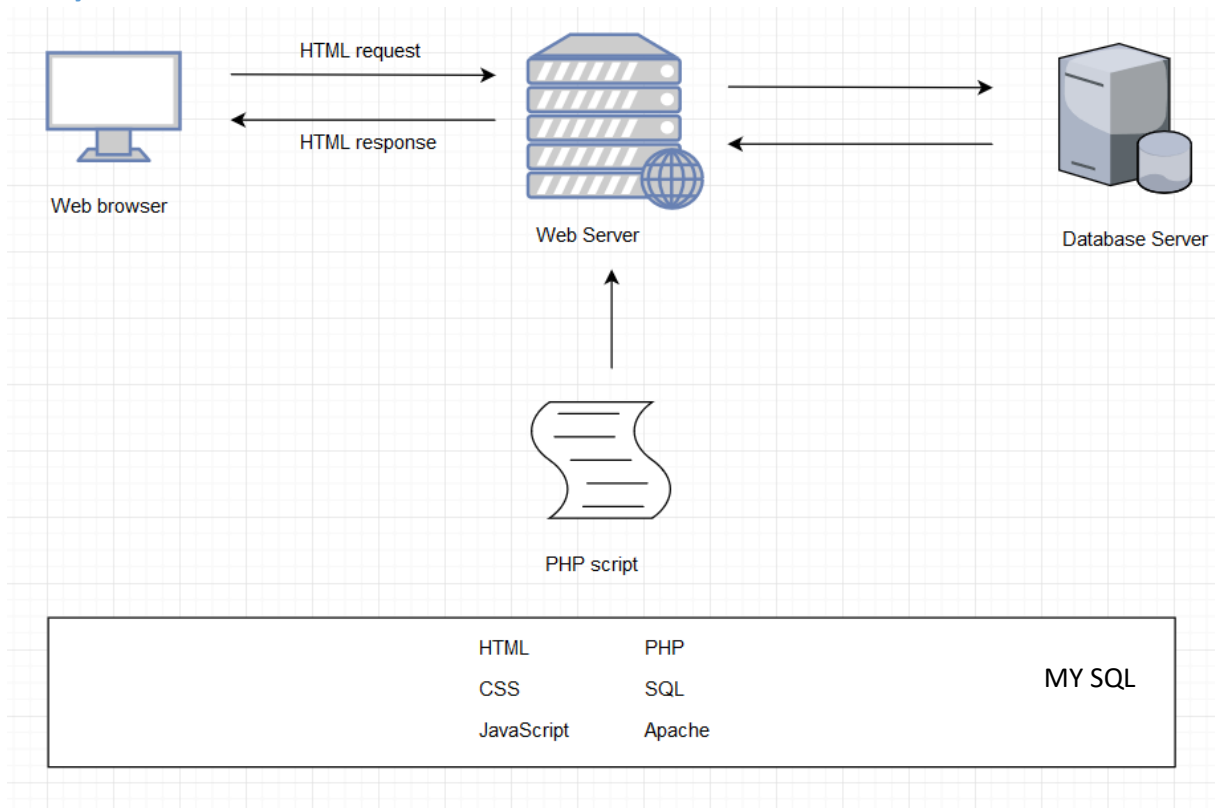

Figure 1 – System Architecture

2. Requirements Scope

2.1 In Scope

Requirement No	Description
R01	The client must be able to log into an admin account
R02	The client must be able add products the web site
R03	Must be able display products by categories
R04	Customers must register place orders
R05	display the current items in the cart
R06	add selected products the cart
R07	delete products (individually or all) from their cart
R08	adjust the quantity of a selected product currently in the cart
R09	preserve the contents of the cart if the user's session is disconnected
R10	have the cart accessible regardless from any machine the customer is logging in
R11	Create a unique file for each order that contains the order confirmation information
R12	include a secure, online payment process

R13	Allow customers view their order history
R14	Provide an intuitive, consistent look and feel the user interface
R15	Use free open source software
R16	Have the system fully tested and up and running in 8 weeks
R20	Allow customers provide reviews for any of the products they have purchased
R21	Must be able display the evaluation reviews for any products
R22	Provide customers with appropriate product recommendations when they log in
R23	Provide customers with any product recommendations when they look at a particular product
R24	Ask customers to agree with the term condition on their first log in

2.2 Out of Scope

No	Requirement
1	preserve the contents of the cart if the user's session is disconnected accidentally
2	allow the order to be shipped to different address and person other than the user
3	Allow customers change their order after they have created it
4	Allow customers change their registration information

3. Functional Requirements

- R01 – The client must be able to log in to an admin account
- R02 – The client must be able to add products to the web site
- R03 – Must be able to display products by categories
- R04 - Customers must register to place orders
- Must provide a fully functioning shopping cart utility where a customer can:
 - R05 – display the current items in the cart
 - R06 - add selected products to the cart
 - R07 - delete products (individually or all) from their cart
 - R08 - adjust the quantity of a selected product currently in the cart
 - R09 - preserve the contents of the cart if the user's session is disconnected
 - R10 - have the cart accessible regardless from any machine the customer is logging in
 - R11 - Create a unique file for each order that contains the order confirmation information
 - R12 - include a secure, online payment process
- R13 - Allow customers to view their order history

Extra:

- R20 – Allow customers to provide reviews for any of the products they have purchased
- R21 – Must be able to display the evaluation reviews for any products
- R22 – Provide customers with appropriate product recommendations when they log in
- R23 – Provide customers with any product recommendations when they look at a particular product
- R24 – Ask customers to agree with the term condition on their first log in

3.1 UML Use Case Diagram

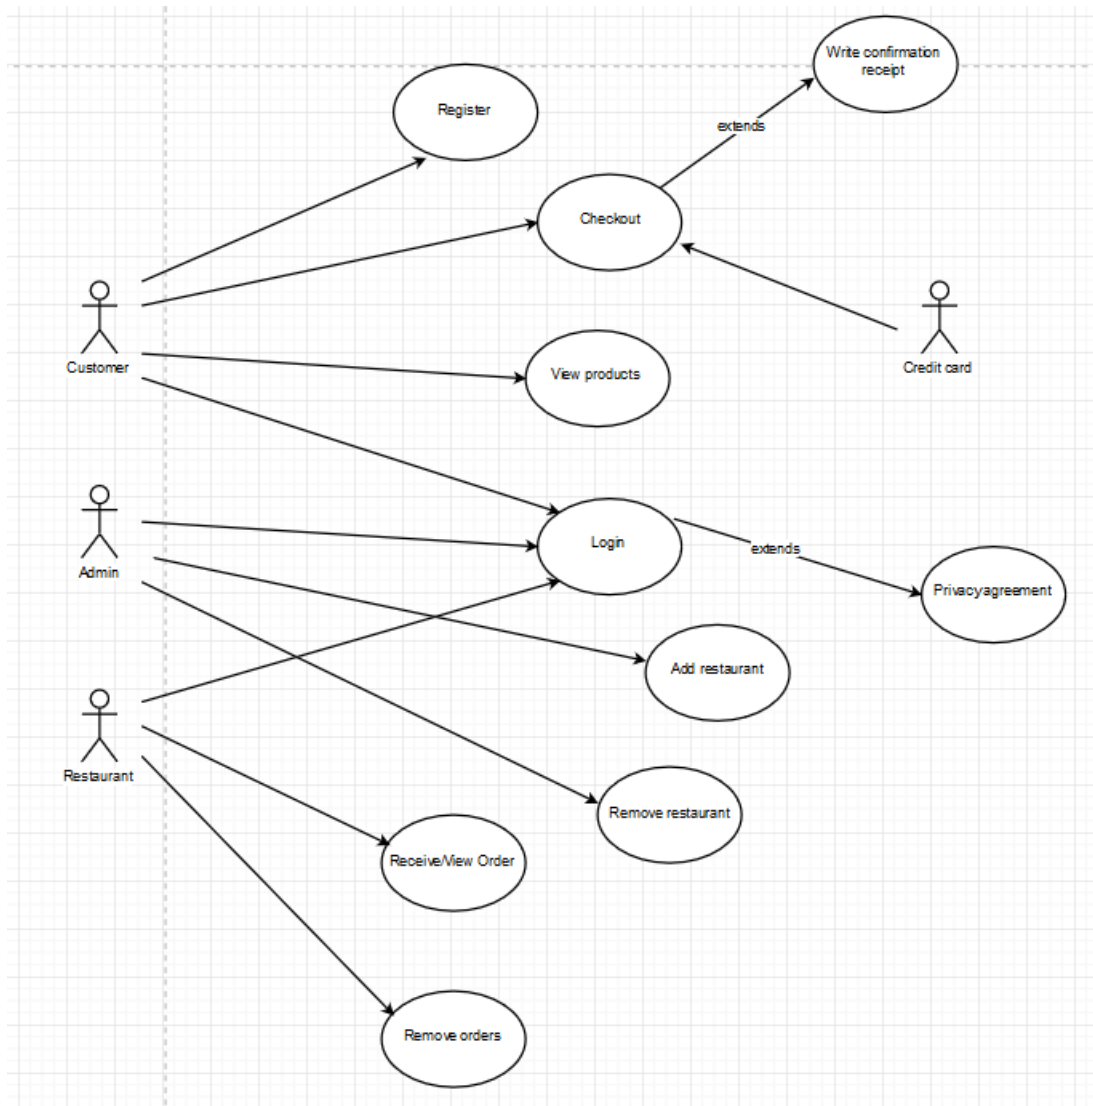

Figure 2 - Login Screen

3.2 UML Use Case Specifications

Registration

Use Case Name:	Register	Use Case ID:	UC001
Primary Actor:	Customer		
Description:	Customers fill out the mandatory items to register their accounts.		
Triggering Event:	Log-in is necessary for making a purchase. Customer information is needed for delivery and payment.		
Steps Performed (Main Path)			
1. Click the register button on the website			
2. Fill the personal information given			
3. Customers are checking the information correctly typed by validation function			
4. The information will be saved on the database			
5. Let the user know that the registration has been approved			
Extensions or Alternate Scenarios			
2a. Users can cancel the registration			
2b. Users do not fill the personal information properly, warning pops			
Pre-Conditions:	The database server must connect to the registration session in the website.		
Post-Conditions:	The customer can log in and view the products		
Assumptions:	Customer is good standing within general registration		
Success Guarantee:	1.The customer can log in successfully with the account they just have created 2. The information is stored in the database without any violation		
Outstanding Issues:	The connection could be lost during registration.		
Priority:	HIGH		

Check-Out

Use Case Name:	Check-Out	Use Case ID:	UC002
Primary Actor:	Customer, Credit Card		
Description:	The customer can check out the amount of products using payment system		
Triggering Event:	The customer selects the products and click the check-out button		
Steps Performed (Main Path)			
1. View the cart after shopping			
2. The customers select the products and click the check-out button			
3.The customers type the credit card number and extra information			
4. Create a Unique file in server to store order’s confirmation			
Extensions or Alternate Scenarios			
3a. The customer put the wrong format of credit card			
3b. Customer try to exit check-out session			
Pre-Conditions:	1. The customers must be logged in 2. The customers must have a valid credit card		
Post-Conditions:	A confirmation message shows up on the website to inform customer about their order		
Assumptions:	Customer is in good standing within the system.		
Success Guarantee:	After payment, customers and restaurants can receive the information		
Outstanding Issues:	Customer’s order cannot proceed The restaurant cannot receive orders		
Priority:	HIGH		

Write Confirmation Receipt

Use Case Name:	Write Confirmation Receipt	Use Case ID:	UC002
Primary Actor:	Customer		
Description:	Customer order receipt will be stored in the server		
Triggering Event:	When the customer checked out the order		
Steps Performed (Main Path)			
1. The Customer checked out the order			
2. The system will receive the order			
3. After the confirmation the system will write the order receipt in new created file			
Extensions or Alternate Scenarios			
2.a When the System is unable to confirm the order, the system will print an error and display it to the customer page.			
Pre-Conditions:	When the payment is successfully completed		
Post-Conditions:	After confirmation the system will create a unique file in the server and stored the receipt		
Assumptions:	The server has enough storage		
Success Guarantee:	The system will save the receipt into the server		
Outstanding Issues:	1. Does the system check if the server has enough storage? 2. Does the system has a proper permission to store a file?		
Priority:	HIGH		

View Products

Use Case Name:	View Products	Use Case ID:	UC003
Primary Actor:	Customer		
Description:	Customer can check products menu which includes product picture, price , review and rating		
Triggering Event:	Customer selects the products		
Steps Performed (Main Path)			
1. After logging in, the customer can select the different category of food to make sure which restaurant they prefer.			
2. The customer views menu from selected restaurants.			
3. The customer can check the picture, price and rating for each product.			
4. The customer can add selected products in their cart.			
5. The customer can view, add or delete current order in cart			
Extensions or Alternate Scenarios			
3a. When the customer select a product, there will be recommendation at the			
Pre-Conditions:	1. The customer must be connected to the system 2. The restaurant has already registered into the system		
Post-Conditions:	The customer can view the product		
Assumptions:	Customer is in good standing within the system.		
Success Guarantee:	1. The customer can check product picture, product price and product rating clearly after selected a restaurant. 2. The customer can check current recommendation for restaurant and dishes in main page 3. The customer can view/change the current order in their cart		
Outstanding Issues:			
Priority:	High		

Log In

Use Case Name:	Log in	Use Case ID:	UC004
Primary Actor:	Customer, Admin, Restaurant		
Description:	Customer, admin and restaurant can log in the system with different authorities		
Triggering Event:	Customer, admin and restaurant can log in the system after they registered.		
Steps Performed (Main Path)			
1. Customer or Admin or restaurant owner open the system.			
2. After they registered, they can access the system through log in page			
3. After logged in, customer or admin or restaurant owner can enter different main page			
Extensions or Alternate Scenarios			
1. After customer log in, the website should base on the current main page with the recommendations			
2. After admin log in, they can manage restaurants and products			
3. After restaurant log in, they can manage the orders			
Pre-Conditions:	1. All types of users log in with valid passwords

Assumptions:	Customer /restaurant is a current user/business in good standing within the system.		
Success Guarantee:	1. The customer can log in and active successfully. 2. The admin can log in and active successfully. 3. The restaurant can log in and active successfully.		
Outstanding Issues:	1. User forgot the account information		
Priority:	HIGH		

Add Restaurant

Use Case Name:	Add restaurant	Use Case ID:	UC05
Primary Actor:	Admin		
Description:	Admin can add more restaurant to the website		
Triggering Event:	Add restaurant button		
Steps Performed (Main Path)			
1. Admin login to the site			
2. Admin choose add restaurant button			
Extensions or Alternate Scenarios			
2a. Admin can cancel adding process. Go back to home screen			
2b. Admin can add menus			
2c. Admin will add restaurant’s information, contact, location, menu, price, etc...			
Pre-Conditions:	1. Admin must be connected to the website 2. Admin must chose add restaurant option		
Post-Conditions:	Admin must fill all information for that restaurant and their products or added at least one restaurant		
Assumptions:	Admin knows how to use and manage the site		
Success Guarantee:	Admin added a restaurant successfully and the information is saved on the database		
Outstanding Issues:	Admin cannot add restaurant Admin add a restaurant without important information		
Priority:	High		

Remove Restaurant

Use Case Name:	Remove restaurant	Use Case ID:	UC06
Primary Actor:	Admin		
Description:	Admin can remove restaurant on the website		
Triggering Event:	Remove restaurant button		
Steps Performed (Main Path)			
1. Admin login to the site			
2. Admin choose remove restaurant button			
Extensions or Alternate Scenarios			
2a. Admin can cancel removing process. Go back to home screen			
2b. Admin will choose which restaurant he/she wants to be removed then click delete button.			
2c. Alert a confirmation message when delete button is clicked			
2d. Admin can remove the products on each restaurant			
Pre-Conditions:	1 Admin must be connected to the website 2 Admin must chose remove restaurant option		
Post-Conditions:	Admin must choose at least one restaurant to be removed		
Assumptions:	Admin knows how to use and manage the site		
Success Guarantee:	Admin removed a restaurant successfully on the database		
Outstanding Issues:	1 Admin cannot remove restaurant 2 The restaurant’s information not deleted properly		
Priority:	High		

Receive and View Orders

Use Case Name:	Receive and View Orders	Use Case ID:	UC007
Primary Actor:	Restaurant		
Description:	The customer’s orders are sent to the restaurant view. The restaurant can view the orders they receive and cook it		
Triggering Event:	When the customer made purchases		
Steps Performed (Main Path)			
1. The restaurant is logged in			
2. Someone makes an order at their own category menu in the website			
3. The confirmation of the order is completed			
4. The system will be sent the order information to the restaurant view			
Extensions or Alternate Scenarios			
2.a The customers canceled their order after payment			
Pre-Conditions:	The restaurant must be register in the database, after that they just need to log in. They mush have the authority as a restaurant		
Post-Conditions:	The restaurant has cooked the order they receive		
Assumptions:	The restaurant is always logged in		
Success Guarantee:	The restaurant will cook as the order they received

Priority:	Medium		

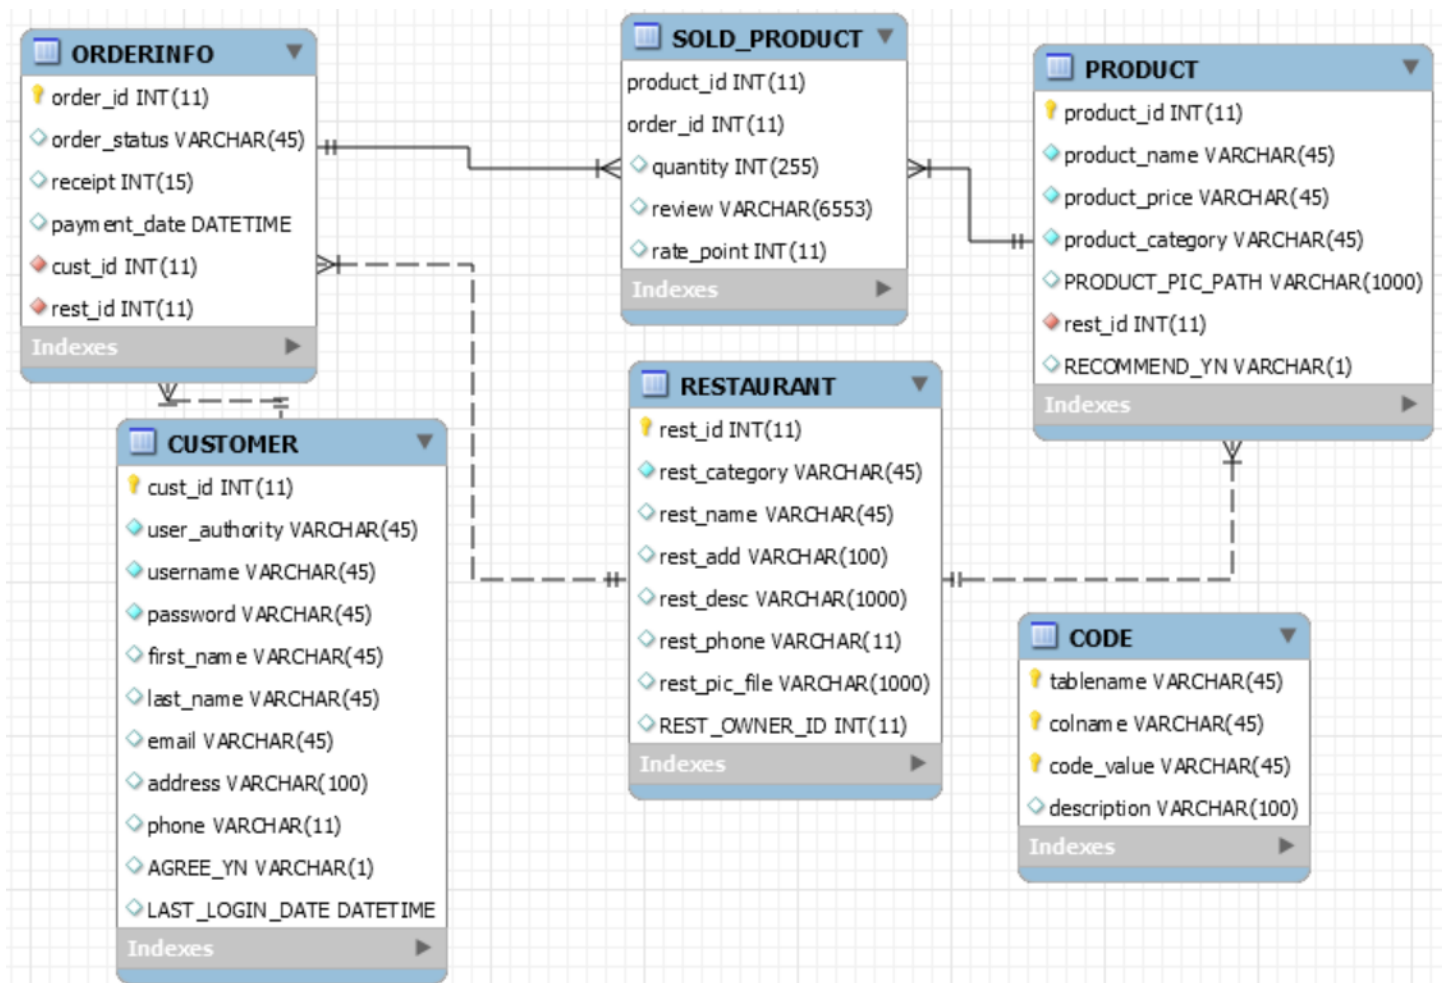

Ask customers to agree with the term condition

Use Case Name:	Ask customers to agree with the term condition	Use Case ID:	UC009
Primary Actor:	Customer		
Description:	Customers being asked to agree with the term condition to continue using web service		
Triggering Event:	On customers first time log in		
Steps Performed (Main Path)			
1. Customers choose log in option			
2. Customers log in successfully			
3. Term condition show up			
Extensions or Alternate Scenarios			
3a. Customers might not agree with the term condition			
Pre-Conditions:	Customers must choose log in option		
Post-Conditions:	Customers agree with the term condition		
Assumptions:	Customers will agree with the term condition		
Success Guarantee:	Customers agree with the term condition		
Outstanding Issues:	3. The website cannot load 4. Customers do not know how to use web service		
Priority:	Medium		

3. Non-Functional Requirements

No	Description
R14	Provide an intuitive, consistent look and feel the user interface
R15	Use free open source software
R16	Have the system fully tested and up and running in 8 weeks

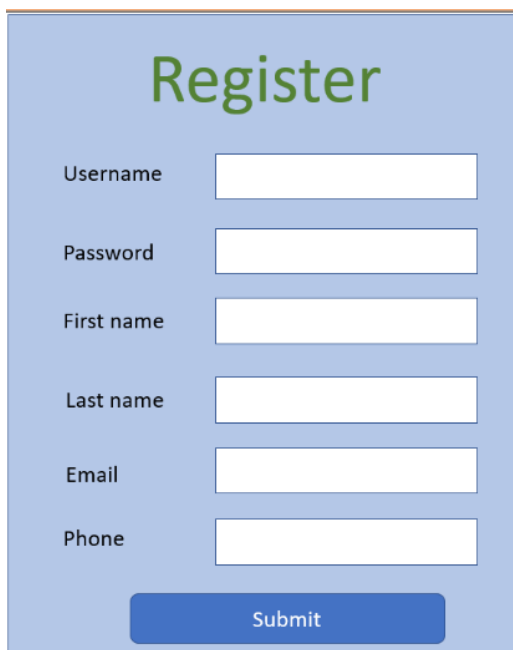

4. Data Model

5. UI Screen Mock-ups

6.1 The following screen is for UC001 and shows the current contents of the customer register page.

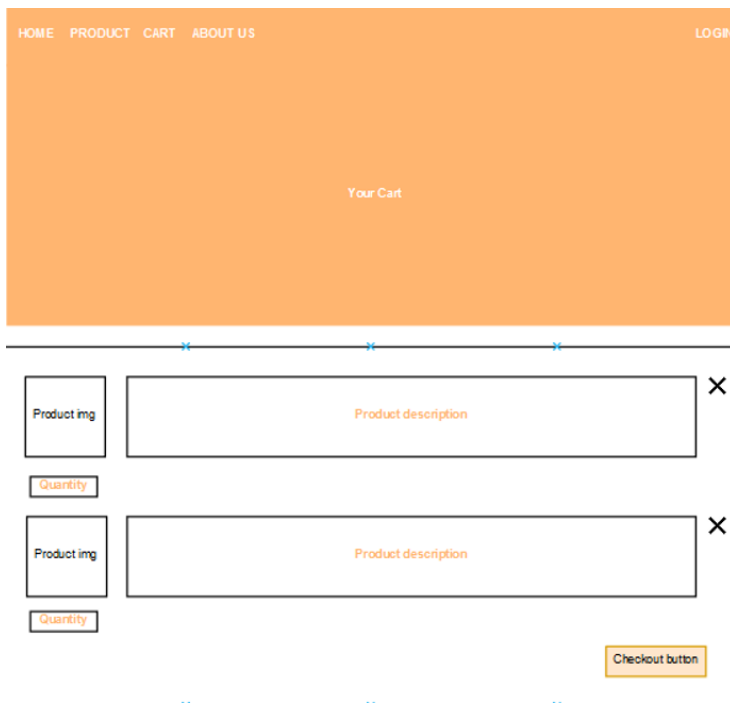

Figure 3-Register page

The mock-up shows a light blue rectangular container with the word "Register" in a large, green, sans-serif font at the top center. Below the title, there are six white input fields with thin grey borders, each preceded by a label in a dark grey font. The labels and their corresponding input fields are: "Username", "Password", "First name", "Last name", "Email", and "Phone". At the bottom of the container, centered, is a blue rectangular button with the word "Submit" in white text.

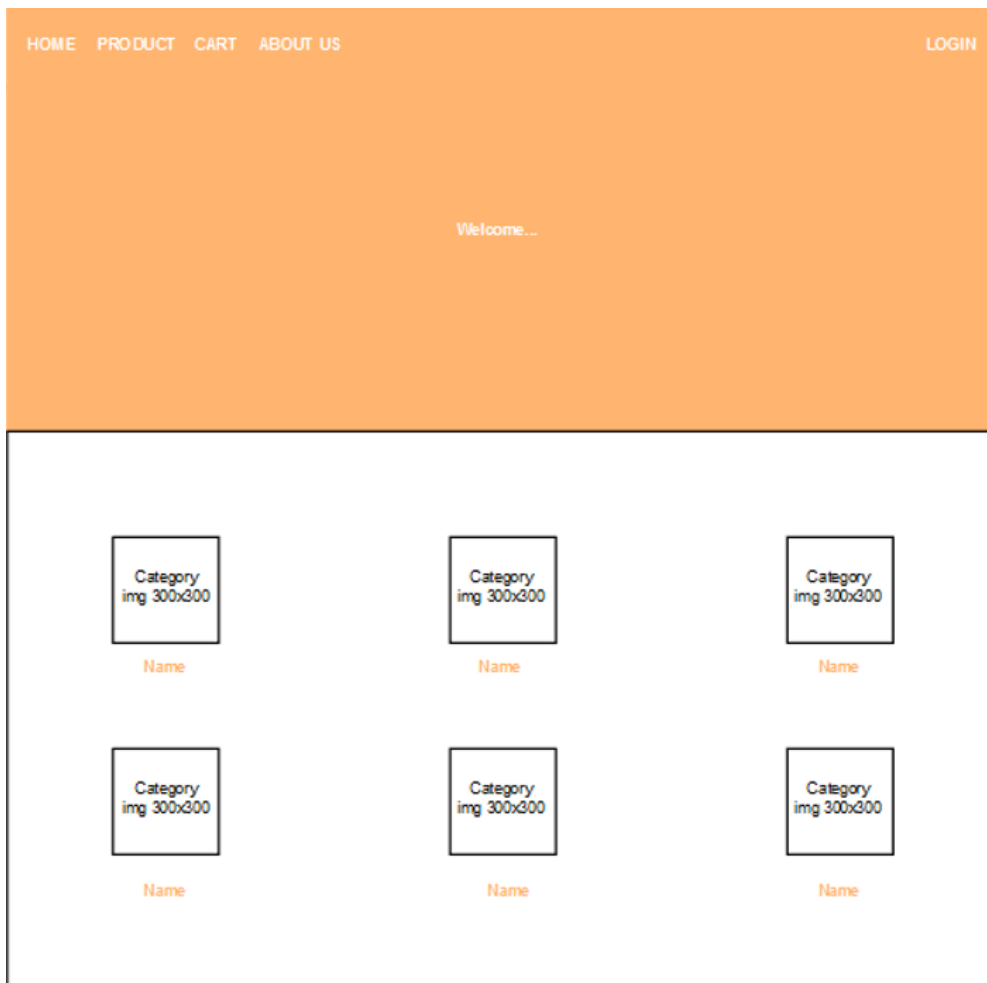

6.2 The following screen is for UC002 and shows the current contents of the customer checkout page.

Privacy Term Accept

Thank you for using ThinkFood! We are committed to providing you the best online delivery experience possible. This Privacy Policy explains what information we collect, how that information is used, under what circumstances we share information, and the choices you can make about that information. This Privacy Policy applies whether you access the ThinkFood Services through a browser, a mobile application, or any other method.

Information we collect

1. INFORMATION YOU PROVIDE TO US OR ALLOW OTHERS TO PROVIDE TO US

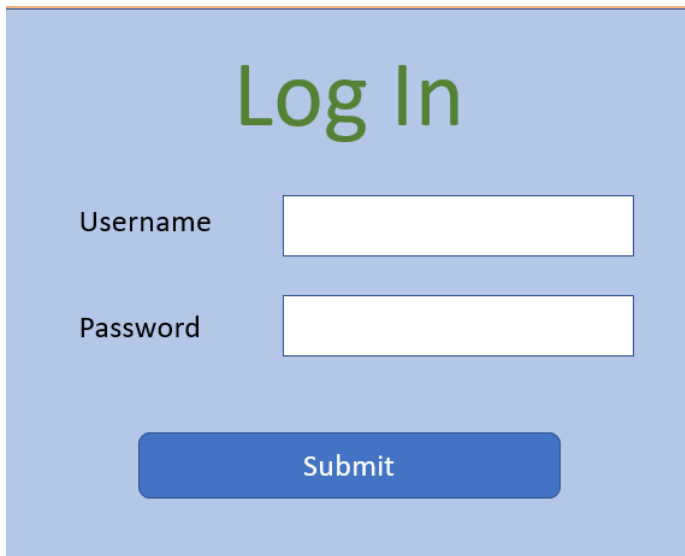

At various points in the ThinkFood experience, you may provide us with information about yourself. For example, when you create an account through the Services, you provide us with personal information like your name, email address, and postal code. If you request a delivery or otherwise use the Services, we collect information including your address, phone number, birth date (when required), credit card information, and the details of your order. Your account information may be updated or corrected by accessing your account settings.

If you log into the Services through a third-party service, both we and that third-party may receive some information about you and your use of the services. For example, if you choose to log into the Services with your

Privacy agreement page

6.4 The following screen is for UC004 and shows the current contents of the customer/Admin/Restaurant login page.

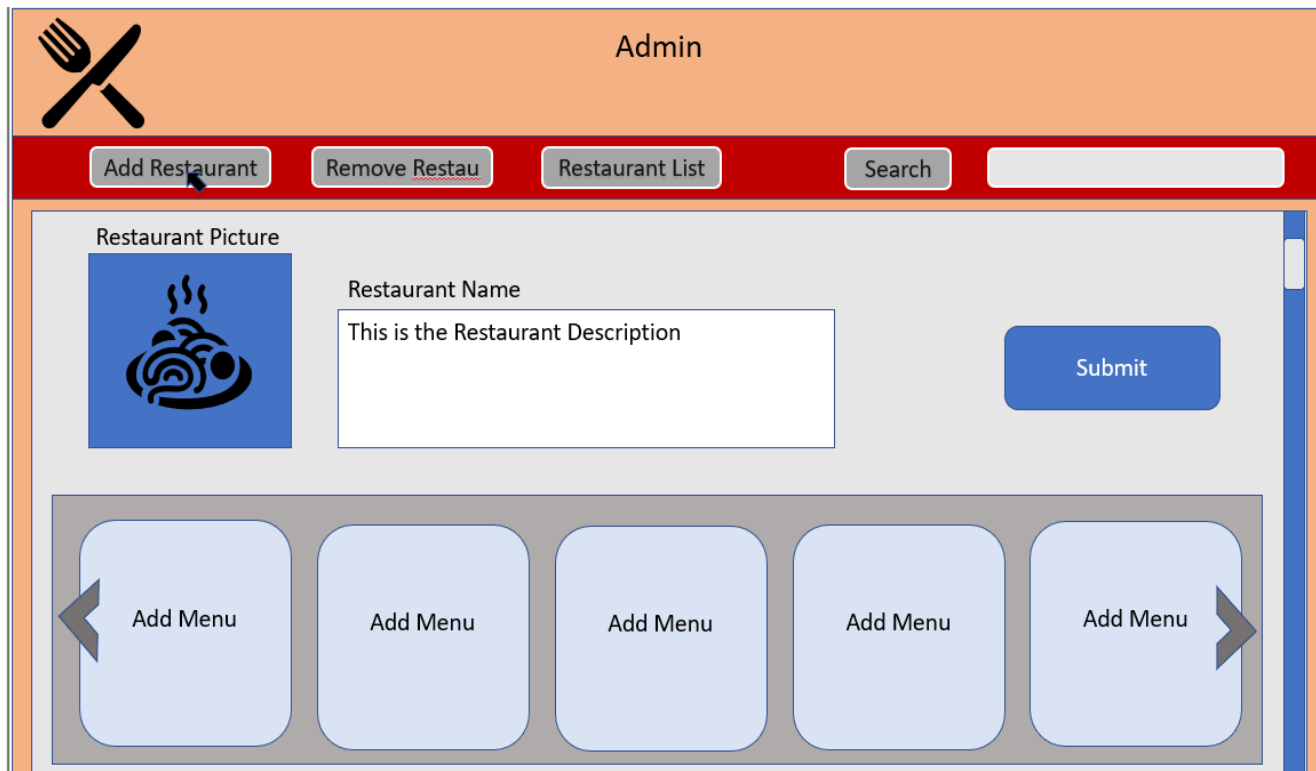

Figure 6-Login page

The login page has a light blue background. At the top center, the text "Log In" is displayed in a large, green, sans-serif font. Below this, there are two white input fields. The first field is labeled "Username" in a dark grey font to its left. The second field is labeled "Password" in a dark grey font to its left. Below the password field, there is a blue rectangular button with the word "Submit" in white text.

6.5 The following screen is for UC005 and shows the current contents of the Admin add restaurant page.

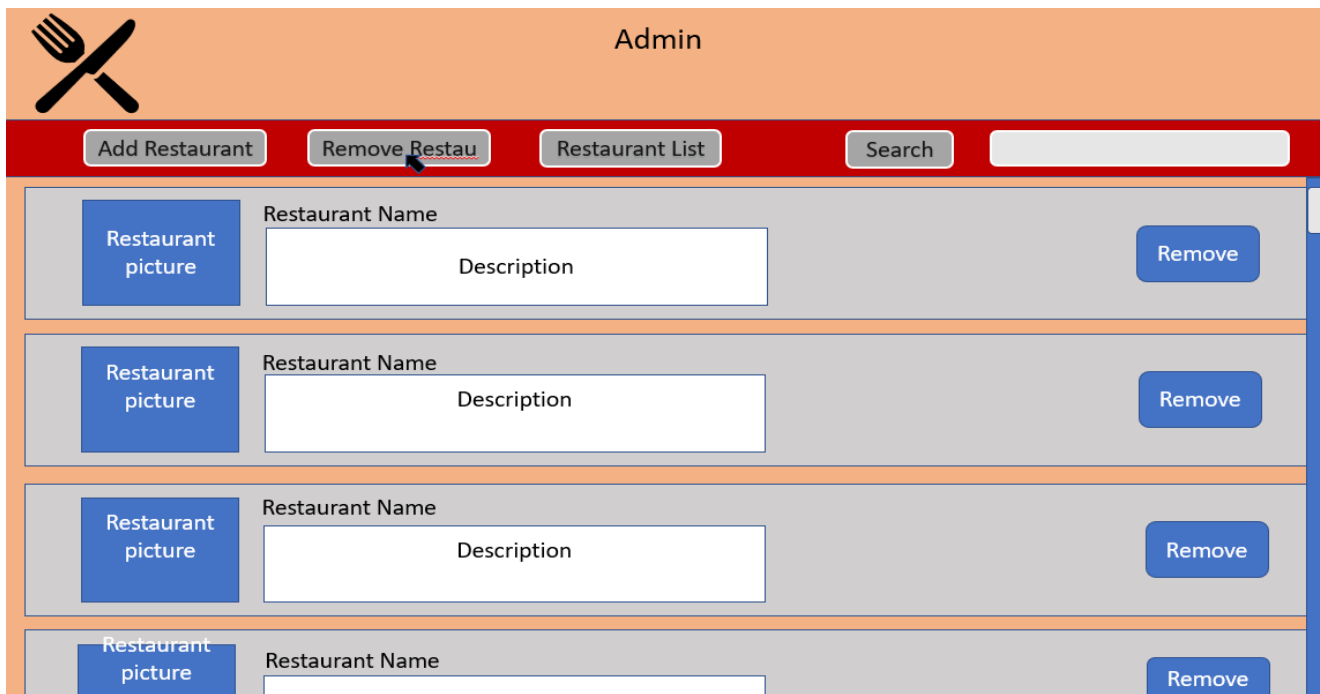

Figure 7-Add restaurant page

The admin page has an orange header bar with a black fork and knife icon on the left and the word "Admin" in the center. Below the header is a red navigation bar containing five buttons: "Add Restaurant", "Remove Restau", "Restaurant List", "Search", and a search input field. The main content area has a light grey background. On the left, there is a "Restaurant Picture" section with a blue square containing a black icon of a flame and a swirl. To the right of the picture is a "Restaurant Name" section with a white input field containing the text "This is the Restaurant Description". To the right of the input field is a blue "Submit" button. At the bottom, there is a horizontal row of five light blue rounded rectangular buttons, each containing the text "Add Menu". The first button has a grey left-pointing arrow on its left side, and the last button has a grey right-pointing arrow on its right side.

6.6 The following screen is for UC006 and shows the current contents of the Admin remove restaurant page.

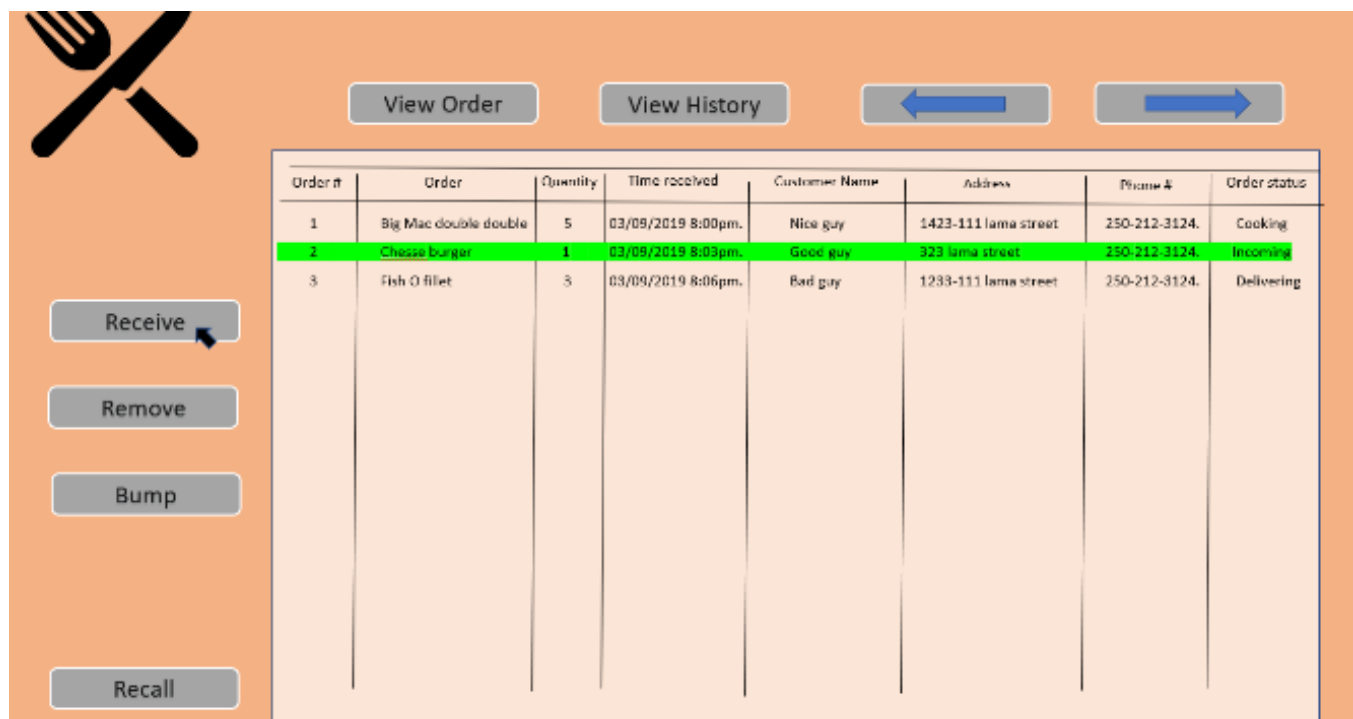

Figure 8-Remove restaurant page

The screenshot shows the 'Admin' interface for removing a restaurant. It features a top navigation bar with a fork and knife icon, and buttons for 'Add Restaurant', 'Remove Restau', 'Restaurant List', and a 'Search' field. Below this, there are four rows of restaurant entries. Each row contains a 'Restaurant picture' placeholder, a 'Restaurant Name' field, a 'Description' field, and a 'Remove' button.

6.7 The following screen is for UC007 and shows the current contents of the restaurant receive/view orders page.

Figure 9-Recrive order page

The screenshot shows the 'View Order' and 'View History' interface. It includes a top navigation bar with a fork and knife icon, and buttons for 'View Order', 'View History', and navigation arrows. Below this, there is a table of orders. The table has columns for Order #, Order, Quantity, Time received, Customer Name, Address, Phone #, and Order status. The second row is highlighted in green. On the left side, there are buttons for 'Receive', 'Remove', 'Bump', and 'Recall'.

Order #	Order	Quantity	Time received	Customer Name	Address	Phone #	Order status
1	Big Mac double double	5	03/09/2019 8:00pm.	Nice guy	1423-111 lama street	250-212-3124.	Cooking
2	Cheese burger	1	03/09/2019 8:03pm.	Good guy	323 lama street	250-212-3124.	Incoming
3	Fish O fillet	3	03/09/2019 8:06pm.	Bad guy	1233-111 lama street	250-212-3124.	Delivering

6.8 The following screen is for UC008 and shows the current contents of the restaurant remove orders page.

Figure 10-Remove order page

Order #	Order	Quantity	Time received	Customer Name	Address	Phone #	Order status
