1. System Overview

Figure 1 – System Architecture

2. Requirements Scope

2.1 In Scope

Requirement	
No	Description
R01	The client must be able to log into an admin account
R02	The client must be able add products the web site
R03	Must be able display products by categories
R04	Customers must register place orders
R05	display the current items in the cart
R06	add selected products the cart
R07	delete products (individually or all) from their cart
R08	adjust the quantity of a selected product currently in the cart
R09	preserve the contents of the cart if the user's session is disconnected
R10	have the cart accessible regardless from any machine the customer is logging in
R11	provide a confirmation email sent the client after they place their order
R12	include a secure, online payment process

R13	Allow customers view their order history
R14	Provide an intuitive, consistent look and feel the user interface
R15	Use free open source software
R16	Have the system fully tested and up and running in 8 weeks
R20	Allow customers provide reviews for any of the products they have purchased
R21	Must be able display the evaluation reviews for any products
R22	Provide customers with appropriate product recommendations when they log in
R23	Provide customers with any product recommendations when they look at a particular product

2.2 Out of Scope

No	Requirement
1	preserve the contents of the cart if the user's session is disconnected accidentally
2	allow the order to be shipped ta different address and person other than the user
3	Allow customers change their order after they have created it
4	Allow customers change their registration information

3. Functional Requirements

- R01 The client must be able to log in to an admin account
- R02 The client must be able to add products to the web site
- R03 Must be able to display products by categories
- R04 Customers must register to place orders
- Must provide a fully functioning shopping cart utility where a customer can:
 - o R05 display the current items in the cart
 - R06 add selected products to the cart
 - o R07 delete products (individually or all) from their cart
 - o R08 adjust the quantity of a selected product currently in the cart
 - o R09 preserve the contents of the cart if the user's session is disconnected
 - o R10 have the cart accessible regardless from any machine the customer is logging in
 - o R11 provide a confirmation email sent to the client after they place their order
 - o R12 include a secure, online payment process
- R13 Allow customers to view their order history

Extra:

- R20 Allow customers to provide reviews for any of the products they have purchased
- R21 Must be able to display the evaluation reviews for any products
- R22 Provide customers with appropriate product recommendations when they log in
- R23 Provide customers with any product recommendations when they look at a particular product

3.2 UML Use Case Specifications

Registration

Use Case Name:	User Account Registrations Use Case ID: UC001			
Primary Actor:	Customer			
Description:	Customers fill out the mandatory i	tems to register t	heir accounts.	
Triggering Event:	Log-in is necessary for making a pu	ırchase.		
	Customer information is needed for	or delivery and pa	lyment.	
	Steps Performed (Main	Path)		
1. Click the register bu	itton on the website			
2. Fill the personal info	ormation given			
3. Customers are chec	king the information correctly typed	d by validation fu	nction	
4. The information wil	l be saved on the database			
5. Let the user know the	hat the registration has been approv	ved		
Extensions or Alternate Scenarios				
2a. Users can cance	l the registration			
2b. Users do not fill	the personal information properly,	warning pops		
Pre-Conditions:	The database server must connect	to the registration	on session in the website.	
Post-Conditions:	The customer can log in and view	the products		
Assumptions:	Assumptions: Customer is good standing within general registration			
Success Guarantee:				
	created 2. The information is stored in the database without any violation			
Outstanding Issues:	2. The information is stored in the database without any violation Dutstanding Issues: The connection could be lost during registration.			
Outstanding issues:	Juistanumg issues.			
Priority:	HIGH			
<u> </u>	<u> </u>			

Check-Out

Use Case Name:	Check-Out the orders	Use Case ID:	UC002	
Primary Actor:	Customer, Credit Card			
Description:	The customer can check out the amount of products using payment system			
Triggering Event:	The customer selects the products and click the check-out button			
	Steps Performed (Main	Path)		
1. View the cart after sho	pping			
2. The customers select the	2. The customers select the products and click the check-out button			
3.The customers type the credit card number and extra information				
4. The confirmation message will be sent to customers via an e-mail				
Extensions or Alternate Scenarios				
3a. The customer put the	wrong format of credit card			
3b.The customer try to exit check-out session				
Pre-Conditions:	The customers must be logged in			
	2. The customers must have th			
Post-Conditions:	ost-Conditions: The customer must get a confirmation email with a purchase receipt			
Assumptions:	Customer is in good standing within the system.			
Success Guarantee:	After payment, customers and restaurants can receive the information			
Outstanding Issues:	There is no response about the payment results			
Priority:	HIGH			

View Products

Use Case Name:	Customer Can View Products	Use Case ID:	UC003
Primary Actor:	Customer		
Description:	Customer can check products men review and rating	nu which include	es product picture, price ,
Triggering Event:	Customer selects the products		
	Steps Performed (Main Pa	ath)	
restaurant they p			od to make sure which
	ws menu from selected restaurants		
	an check the picture, price and rating for each product.		
4. The customer car	nadd selected products in their cart	•	
5. The customer car	n view, add or delete current order i	in cart	
Extensions or Alternate Scenarios			
3a. When the customer so	elect a product, there will be recomm	mendation at th	е
Pre-Conditions:	The customer must be connected to the system		
	2. The restaurant has already reg		system
Post-Conditions:	The customer can view the produc	ct	
Assumptions:	Customer is in good standing within the system.		
Success Guarantee:	The customer can check product picture, product price and product rating clearly after selected a restaurant.		
	The customer can check current recommendation for restaurant and dishes in main page		
	3. The customer can view/change the current order in their cart		
Outstanding Issues:			
Priority:	High		

Log In

Use Case Name:	Logging in for Customer, Admin and Restaurant	Use Case ID:	UC004
Primary Actor:	Customer, Admin, Restaurant		
Description:	Customer, admin and restaurant can log in the system with different authorities		
Triggering Event:	Customer, admin and restaurant can log in the system after they registered.		
	Steps Performed (Main	Path)	
1. Customer or Admin o	r restaurant owner open the syste	m.	
2. After they registered,	they can access the system throu	gh log in page	
3. After logged in, custo	mer or admin or restaurant owner	can enter differe	ent main page
Extensions or Alternate Scenarios			
After customer log in, the website should base on the current main page with the recommendations			
2. After admin log in, the	2. After admin log in, they can manage restaurants and products		
3. After restaurant log in	3. After restaurant log in, they can manage the orders		
Pre-Conditions:	re-Conditions: 1. All types of users log in with valid passwords		
Post-Conditions:	ost-Conditions: 1. All users can be logged in with different authorities		orities
Assumptions:	Customer /restaurant is a current user/business in good standing within the system.		n good standing within
Success Guarantee:	2. The admin can log in and active successfully.		
Outstanding Issues:	3. The restaurant can log in and active successfully.s: 1. User forgot the account information		IIIy.
Priority:			

Add Restaurant

database Outstanding Issues: Admin cannot add restaurant	Use Case Name:	Add restaurant Use Case ID: UC05				
Triggering Event: Add restaurant button Steps Performed (Main Path) 1. Admin login to the site 2. Admin choose add restaurant button Extensions or Alternate Scenarios 2a. Admin can cancel adding process. Go back to home screen 2b. Admin can add menus 2c. Admin will add restaurant's information, contact, location, menu, price, etc Pre-Conditions: 1. Admin must be connected to the website 2. Admin must chose add restaurant option Post-Conditions: Admin must fill all information for that restaurant and their product added at least one restaurant Assumptions: Admin knows how to use and manage the site Success Guarantee: Admin added a restaurant successfully and the information is saved on the database Outstanding Issues: Admin cannot add restaurant	Primary Actor:	Admin
